Session 2 : GCFS Selected Use Cases and Hands On.....	11
Closure	17

Day 1

18 June 2026 | Global Consumer Financial Services

Session 1 : GROUP–GCFS | Sales, Service & Productivity

Q.1 | If there is an existing customer, is data in the form pre-populated using existing bank data?

Asked by: Gullapudi Pavan Kumar

BUSINESSNEXT Response: Yes, it gets auto populated via the CRM system and the journey can be submitted.

Q.2 | Can it be in any other language?

Asked by: Nick Goh Kay Meng (SG)

BUSINESSNEXT Response: Yes, the platform is multilingual.

Q.3 | If the lead comes from YouTube, who will the system recommend referring it to?

Asked by: Offline Attendee

BUSINESSNEXT Response: This depends on the nature of the lead.

Q.4 | When the lead is shared with the RM team, they need some information to act on it. How does the system filter and provide that?

Asked by: Offline Attendee

BUSINESSNEXT Response: The CRMNEXT application prompts an alert on the assigned user's application based on the assignment rule adhered in the workflow backend. Once the user clicks on the alert, the application takes the user to Lead 360 which has all the acquired information of the lead and system generated next step alerts on how to take the lead to closure.

Q.5 | Please show the instance where the agent is reaching out to the customer and the entire conversation with duration and transcripts.

Asked by: Jason Keat

BUSINESSNEXT Response: Showcased partially via demo.

Q.6 | What will be your foundation for starting a CRM project implementation? To what extent can the bank change the interface and workflow in the system?

Asked by: Offline Attendee

BUSINESSNEXT Response: BUSINESSNEXT sits with the bank's team to discuss the as-is scenario and the to-be vision that the bank aims to achieve, and plans in sync with the end goal. The workflows can be configured according to the bank's requirements; we have 12 levels of design tools, which we will showcase in the upcoming sessions.

Q.7 | How is the data gathered, sourced, and presented for all processes — Customer 360 to drive all operations?

Asked by: Offline Attendee

BUSINESSNEXT Response: The data is sourced from the core systems of the bank.

Q.8 | Can the system trigger a notification to a customer when they walk into a mall, allowing Maybank to send them an SMS about offers available at that location?

Asked by: Noor M.

BUSINESSNEXT Response: This is part of the marketing solution and falls under a separate scope.

Q.9 | Since the IVR is connected to the CTI, can offer generation be automatic? Please provide an example of a vendor with a similar scenario.

Asked by: Offline Attendee

BUSINESSNEXT Response: It depends on the CTI vendor the bank uses; the system can auto-fill the data. BUSINESSNEXT has experience with CISCO integration.

Q.10 | If an SR is assigned to different Business Units, will it continue to run or is it closed each time the SR ticket is assigned to another team? Can we see the total end-to-end journey with a breakdown by unit as well as a cumulative SLA view?

Asked by: Jennie

BUSINESSNEXT Response: Since SLAs are defined, one can track the end-to-end flow from sourcing to closure. Internal and external SLAs are pre-defined, so if an SR moves to another

department, the SLAs carry over accordingly. The remaining details will be covered in the second half of the session.

Q.11 | Please share a demo on the knowledge and product library with respect to wealth products, reports, etc. How scalable is the library across different products, and how can an RM filter and search through it based on different product types?

Asked by: Offline Attendee

BUSINESSNEXT Response: Showcased via demo, including the wild card search functionality.

Q.12 | There is a system in Singapore that checks customer experience and risk profiling, then shortlists products based on client eligibility (Sales Advisory Process). Can both processes run concurrently, or does one system have all the capabilities? How do we keep all systems alive without duplication?

Asked by: Offline Attendee

BUSINESSNEXT Response: The advisory component resides outside the system, but the product portfolio lives within the platform, so both systems must work in tandem. Wealth portfolio data is extensive, so integration with current systems will be required.

Q.13 | Is there any prioritisation done for leads for the same customer on the same day, if they appear across multiple channels (digital activity, form submission, etc.)? How is this reflected on screen?

Asked by: Gullapudi Pavan Kumar

BUSINESSNEXT Response: Yes, there is prioritisation for leads from the same customer on the same day across multiple channels. The priority logic can also be customised based on Maybank's requirements. It will be reflected on Customer 360 under the Interactions tab, filtered by channel and priority.

Q.14 | May I confirm that the upsell and cross-sell products for a customer are already configured in the platform based on our database?

Asked by: Marini

BUSINESSNEXT Response: Yes, the upsell and cross-sell products are already configured in the BUSINESSNEXT platform using the Trinity cross-sell modeller. We can support whitespace offers as well as integrate with Maybank's systems (data mart, ODS, BI tool) if offers are generated externally based on core banking, credit card, or lending data.

Q.15 | Meaning that certain Maybank-specific or new campaigns can be applied or modified within the existing module, and leads can then be generated to market via multiple available channels?

Asked by: Marini

BUSINESSNEXT Response: Yes.

Q.16 | For new-to-bank (NTB) customers, are you facilitating customer onboarding and screening as well?

Asked by: Rani A/P Sinnasamy

BUSINESSNEXT Response: Yes, for NTB customers, we will facilitate customer onboarding and screening. This will be showcased in the demonstration. We plan to show an Individual, Wealth, and SME employee-facing journey as per the RFP requirements.

Q.17 | Will you be sharing a Quality Assurance, SLA, and TAT dashboard for staff, supervisors, and QA teams? In Singapore, is the Credit Bureau fetch direct? Are workflows customisable? Changes to workflows over time are anticipated — can these be handled in-house or will the vendor need to be involved?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: For fraud cases, we can trigger an AML or fraud check as part of the workflow. Yes, the Credit Bureau fetch is direct in Singapore, as the bureau provides API and direct adaptor access. Yes, workflows are configurable within the platform via our proprietary AutoFlow designer — no custom development is required. Configurations can be managed in-house.

We will set up a small Centre of Excellence (COE) for Maybank, trained by BUSINESSNEXT during project implementation. Configuration capabilities will be showcased on Day 4 during the technical session.

Q.18 | Is there a country-specific dashboard showcasing key indicators such as product type, SLA, and risk alerts for both sales and middle/back office teams needing to action and close work requests?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Please refer to the view for the Service Head perspective of regions and branches mapped in Malaysia. This is a Service Request Dashboard for the Call Centre, covering SLAs, TAT, and the fulfilment team — including inbound and outbound interactions.

Q.19 | Is this applicable to other units that require a similar dashboard?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Indeed. Below is an example from the perspective of a sales unit team in the Malaysia region. The information can be drilled down based on sub-region, branch, RMs, and customer segment. We will showcase dashboards across Sales Automation and Service Automation for Retail, Private, SME, and Corporate segments.

Q.20 | With the introduction of this new system, will it replace the current Sales Advisory process, or will it be used alongside the existing process?

Asked by: Kok Suet Lai (SG)

BUSINESSNEXT Response: We would like to discuss this query during the Q&A session to better understand the requirement.

Q.21 | Is credit scoring available for existing non-borrowing and NTB customers, or only for existing borrowers? Does the system integrate with credit rating agencies (CRAs), and will it reach out to the CRA every time an RM searches for insights? What about the fees incurred with each CRA call?

Asked by: Zurairah Bt Isahak

BUSINESSNEXT Response: Credit scoring checks can be performed for both NTB and ETB customers. For NTB customers, this is done as part of the onboarding workflow (e.g., Asset or Card onboarding). For ETB customers, bureau checks can be triggered at a frequency agreed with the bank to optimise costs. We leverage the bank's existing agreement with the CRA for all checks.

Q.22 | Will this platform replace our existing LOS (MBOS)? Currently, originating a loan requires data input via MBOS. With this CRM system, it appears the same data input is needed — resulting in duplication.

Asked by: Nassaruddin Binti Liham

BUSINESSNEXT Response: BUSINESSNEXT has an additional lending offering — the Digital Lending Platform (DLP) — which unlocks the complete LOS capabilities. Since this is a CRM

RFP, lead sourcing, Quick Data Entry (QDE), Detailed Data Entry (DDE), KYC, credit bureau (CTOS) integration, and document verification will reside in the CRM. The application will then be handed off to MBOS via API for credit underwriting and operational workflow through to disbursement. Reverse status updates will flow back to the CRM from MBOS, ensuring end-to-end tracking within CRMNEXT.

Q.23 | (1) Is there AI classification of complaint types (process, service, etc.)? (2) Do we know how many requests converted to complaints, and is there a linkage? (3) Based on month-to-date complaints, can we surface the top 5 new trends so the team can act immediately to prevent future complaints?

Asked by: Gullapudi Pavan Kumar

BUSINESSNEXT Response: (1) Yes, AI-based classification of complaint types is available out of the box in the Customer Service Automation module. (2) Yes, we can design the service request process to track conversion to complaints. Requests converted to complaints are tagged as child cases, maintaining a parent-child linkage for reporting. (3) Yes, based on MTD, QTD, and YTD complaints, we can surface the top 5 trends using service insights and publish these to the service request team for immediate action.

Q.24 | Does the SLA support cut-off time to set the target date?

Asked by: Muhamad Razif Bin Jaffar

BUSINESSNEXT Response: Yes, the SLA supports cut-off time configuration to set the target date.

Q.25 | We are exploring a Fixed Deposit Preferential Rate approval workflow within the CRM to achieve faster turnaround and support GTM initiatives, leveraging existing CRM data for informed decision-making by approvers. Is this feasible?

Asked by: Daniel Tan Wei Chuen

BUSINESSNEXT Response: Yes, absolutely. This platform can also be considered for all pricing requests from branches, not just Fixed Deposits.

Q.26 | Can a case be assigned or escalated to multiple support teams?

Asked by: Sophia Soon Jade Li

BUSINESSNEXT Response: Yes, case creation can be assigned to multiple support teams in parallel. With the rise of automation and straight-through processing (STP), however, this may not always be necessary.

Q.27 | (1) Does the platform have AI capabilities to identify and differentiate between conventional and Shariah-compliant assets, loans, or financing facilities? (2) Can the platform generate a Shariah-compliant dashboard with specific insights such as Zakat calculations and cleansing requirements for non-Shariah assets?

Asked by: Shahizan Bin Md Noh

BUSINESSNEXT Response: This overlaps with lending workflows. It is partially possible if the relevant process data resides within the CRM.

Q.28 | Is there tracking of case ageing and SLA for cases created? Are there escalation and notification alerts for cases exceeding the defined SLA?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: Yes, all service requests and complaints have internal and external SLAs defined at the category and sub-category level. SLAs can be set across the end-to-end workflow and departmental sub-workflows.

Q.29 | Beyond cross-unit SLA tracking, what about tracking at the ownership level where case ownership has changed but the case remains within the same unit? Could you also demo escalation flows and SLA ageing scenarios in the afternoon service session?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: This is also possible. We will cover it as part of the Service demonstration.

Q.30 | How is a single interaction with multiple requests tracked? E.g., one call covering deposits, investments, and cards – should staff create multiple cases or one parent with three child cases? For trend analysis, how would such cases be tracked? Does the system support main and sub-categories for accurate tracking?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: We would log one service request covering three issues, and the system will automatically create child cases. The system is parameterised and supports tracking based on the nature of transactions or any parameter defined in the service

request workflow. Yes, the system supports main and sub-categories for accurate tracking of interaction types.

Q.31 | Would BUSINESSNEXT be able to support Maybank in uploading internal pricing structures and portfolio data for system consumption in the absence of an existing database? For example, a predefined group of VIP customers with pre-approved Fixed Deposit rate ranges.

Asked by: Daniel Tan Wei Chuen

BUSINESSNEXT Response: BUSINESSNEXT can support Maybank in uploading internal pricing structures and portfolio data, though this falls outside the current RFP scope. It would require a data mart to store product, pricing, and portfolio masters, which can then be integrated with or surfaced in the CRM. BUSINESSNEXT's DATANEXT platform can fulfil this use case for VIP customers with pre-approved FD rate ranges.

Q.32 | Would it also be possible to implement a pre-approval workflow within the system? For example, a customer pre-approved for an FD rate of 3.7% – the system could automatically validate the rate during submission by the originator and streamline the approval process.

Asked by: Daniel Tan Wei Chuen

BUSINESSNEXT Response: Yes, absolutely. A pre-approval workflow during submission by the originator is achievable, provided the CRM has the relevant data available in its database.

Session 2 : GCFS Selected Use Cases and Hands On

Q.1 | Is it possible to add a new dropdown field in the lead details screen?

Asked by: Muhamad Razif Bin Jaffar

BUSINESSNEXT Response: Yes, it is possible.

Q.2 | The bank already has a KYC system. Can the CRM system integrate with it? What happens if the RM uploads new salary slips?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, integration is possible.

Q.3 | Meaning the AML screening will integrate with Maybank's existing application?

Asked by: Rani A/P Sinnasamy

BUSINESSNEXT Response: Yes, that is possible. It is a minor change on the field to either add or modify the dropdown values.

Q.4 | How do you ensure that the zip code data is kept up to date?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: We maintain the complete Address and Geography Master as part of the CRM implementation during the application setup prior to go-live. We will act as a slave system and integrate with the bank's MDM to keep the masters up to date.

Q.5 | I see OCR for MyKad in the demo. Does it also work for non-Malaysian passports, MYKAS, Malaysian Visa, and MM2H?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: We have a Document AI solution as an additional offering, which can extract all Malaysian structured and unstructured documents. Alternatively, if the bank already has an OCR solution, we can integrate with it.

Q.6 | Are the documents uploaded hosted in your system, or can they be centralised and stored in our existing Document Management System (DMS)?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: We would integrate with Maybank's Enterprise DMS and store documents as a centralised repository. CRMNEXT can integrate with your DMS against a lead, customer, or service request. However, as part of the onboarding or lead workflow, we also provide the capability to upload documents to the CRMNEXT DMS should the bank prefer to leverage it.

Q.7 | Is the KYC system leveraging Maybank's existing KYC/AML system, or is it proprietary to BUSINESSNEXT?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: Maybank's existing KYC system will be leveraged and integrated with CRMNEXT lead or onboarding workflows.

Q.8 | If we use our own KYC system, do you bring it into yours for a seamless user experience?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: The Lead or Onboarding journey is initiated and sourced through the CRMNEXT application. We serve as the front-office application and integrate with your KYC application to provide the end user with a seamless UI experience.

Q.9 | Can the KYC status be system-triggered rather than user-changed, so that users cannot shortcut the process?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: Yes, the KYC status can be system-triggered proactively based on defined criteria to prevent users from bypassing the process.

Q.10 | We continually enhance our AML system on a quarterly basis and conduct live tests for DR and other matters regularly. If your system connects to our KYC system, will the CRM need to participate in live tests each time? Can the vendor support from 12am to 6am on Saturdays?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: Yes, CRMNEXT will participate in the support required for any impact to the CRMNEXT application workflow. Support will be provided as per the agreed contractual terms and the bank's policy.

Q.11 | When new fields need to be created in your system as they become mandatory fields during customer data capture, how much notice do you need to deploy those fields?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: We can set up a Centre of Excellence (COE) team within Maybank by training them on the application, so that when new fields are required, the Maybank team can deliver them as per the change request process.

Q.12 | You can have a validation built to not take the customer's word that they are not a Maybank customer, as we will retain legacy data and the customer's record will remain in our database even if they are no longer active.

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: Yes, we can build validation rules on leads and customers and provide search widgets to identify whether a customer is a Maybank customer, based on legacy data and records that remain in the database even if they are no longer active.

Q.13 | Can you perform a validation read from our database and reject leads if we have already tagged them as customers who are not eligible to be customers of the bank?

Asked by: Omar Shariff Bin Abu Bakar

BUSINESSNEXT Response: Yes, we can build a validation based on a data read from Maybank's database, and reject leads if they have been tagged as ineligible customers.

Q.14 | From a client relations perspective, can the system remind or alert RMs and clients on special occasions such as birthdays, TD maturity, event invites, and KYC review dates? Can it include a dashboard and a 'Next Best Buy' recommendation linked to the Outlook calendar for follow-through?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Yes, CRMNEXT's alert management module allows setting up rules for reminders and alerts for RMs and clients on special occasions such as birthdays, TD maturity, event invites, and KYC review dates. A Notification and Reminder Dashboard can also be provided. Based on the data, automated activities can be synced to the Outlook calendar for follow-up.

Q.15 | Can the RM use the system to get updates on market news, tickers, and index numbers?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the summary page can provide all information and insights relevant to the RM, as showcased via the broadcast view in the demo.

Q.16 | Can the call recording be linked or tied to the service request that was created?

Asked by: Sophia Soon Jade Li

BUSINESSNEXT Response: Yes.

Q.17 | Are the Board of Directors or Senior Management team information available in the SME 360 view?

Asked by: Valentina Phua May Lin

BUSINESSNEXT Response: Yes, the complete SME hierarchy is available, including Board of Directors and Senior Management information.

Q.18 | Is the call transcript tied to the service request in real time?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Yes, the transcript can be pulled from the CTI and attached to the service request in real time, as showcased in the demo.

Q.19 | Is the CCRIS report only for customers with borrowing facilities at Maybank? What about customers who do not have borrowing with Maybank but have facilities with other banks – can their CCRIS record be accessed for NBO or scoring purposes?

Asked by: Zurairah Bt Isahak

BUSINESSNEXT Response: Yes, the CCRIS report can be pulled for a customer who is new to bank (NTB) for Maybank, or an ETB customer who holds a liability product but is now interested in a loan product. This information can be used for NBO and scoring purposes, as explained via the demo.

Q.20 | How do we track productivity of leads – TAT, time spent on each lead, any conversations that occurred, and how do we map all of these?

Asked by: Offline Attendee

BUSINESSNEXT Response: Showcased via demo.

Q.21 | How is the AI cost structured? If the bank does not take any AI tool, will the cost be affected? What is the benefit of using BUSINESSNEXT's AI tool? How many product enhancements are provided per year?

Asked by: Ezir Kushairi

BUSINESSNEXT Response: The AI cost is transparent and quoted based on the bank's scope. The components and details can be discussed at the time of contracting. We have built the models based on our experience and expertise, and proposed them according to the bank's requirements. We can elaborate further on AI capabilities in the upcoming sessions. We provide 1 major and 2 minor upgrades per year.

Q.22 | How is lead scoring done — AI-based or rule-based?

Asked by: Offline Attendee

BUSINESSNEXT Response: Both approaches are supported; it can be done using AI-based scoring or rule-based scoring.

Q.23 | Do we need to move all customer-level and account-level data to the CRM system?

Asked by: Offline Attendee

BUSINESSNEXT Response: The operational data will reside in the CRM. The bank can store the gold copy in the MDM or data warehouse.

Q.24 | Is there any data storage cost associated with this?

Asked by: Offline Attendee

BUSINESSNEXT Response: We have performed sizing based on volumes provided by the bank, with certain assumptions, which we can revisit at the time of contract.

Q.25 | For NTB onboarding, does the information also need to be updated in the master data?

Asked by: Offline Attendee

BUSINESSNEXT Response: We can update the data in the CRM, and we can revisit the scope to determine whether data needs to be pushed to other systems as well. The master copy can reside with BUSINESSNEXT or in the bank's landing zone.

Closure

The Proof of Concept (POC) engagement between BUSINESSNEXT and Malayan Banking Berhad (Maybank) was conducted successfully across four sessions from 18 to 23 June 2026 in Kuala Lumpur, Malaysia. The sessions covered a broad spectrum of functional and technical dimensions of the BUSINESSNEXT CRM platform, evaluated by stakeholders from Maybank's Global Consumer Financial Services (GCFS), Global Banking & Markets / Wholesale Banking (GGB), and IT & Information Security divisions.

A total of 190 queries were raised and addressed across the four days, spanning platform capabilities, architecture, integration, data governance, AI and analytics, user experience, implementation methodology, and commercial models. The breadth and depth of questioning reflect Maybank's thorough engagement and commitment to making a well-informed platform selection decision.

BUSINESSNEXT remains committed to partnering with Maybank through this evaluation and beyond, ensuring that the platform delivered is fully aligned with Maybank's strategic CRM objectives and long-term digital transformation goals.
