Day 2

19 June 2026 | Implementation, Support and Services

Session 1 : Implementation, Support & Services

Q.1 | Based on your implementation expertise, why is Option 2 the best option for Maybank?

Asked by: Offline Attendee

BUSINESSNEXT Response: Option 2 offers a lower Total Cost of Ownership (TCO) compared to other options. We conducted a cost-benefit analysis and proposed this option as it benefits Maybank from an investment cost perspective and is in compliance with data residency requirements.

Q.2 | What deployment model should be proposed for Malaysia, given that it should be compliant with the bank's investment banking regulations?

Asked by: Offline Attendee

BUSINESSNEXT Response: This can be discussed with the bank's team taking into account the investment banking regulatory scenario in Malaysia.

Q.3 | How is the TCO lower in Option 2? What factors have been considered in the application and database sizing?

Asked by: Offline Attendee

BUSINESSNEXT Response: We have factored in costs such as database storage, egress costs, and related infrastructure components.

Q.4 | Since you are cloud-agnostic, can the solution be implemented in Maybank's own landing zone?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes.

Q.5 | How will the deployment of different workflows take place with respect to single- and multi-tenant architecture?

Asked by: Jason Keat

BUSINESSNEXT Response: Malaysia and Singapore will share a common server under Option 2. Any change in one business function will impact both. A single instance can also be configured for Malaysia and Singapore separately, if required.

Q.6 | Does this architecture include Business Continuity Plan (BCP) guidelines?

Asked by: Jason Keat

BUSINESSNEXT Response: Yes.

Q.7 | How frequently are updates released for single and multi-tenant architectures?

Asked by: Offline Attendee

BUSINESSNEXT Response: We provide 1 major and 2 minor updates per year.

Q.8 | What is the advantage of running Indonesia on one application instance versus Malaysia and Singapore running on a multi-application instance?

Asked by: Ezir Kushairi

BUSINESSNEXT Response: In a single-instance scenario, a change in one business function will affect other functions as well. We would advise keeping Malaysia and Singapore owners separate for retail and corporate business functions.

Q.9 | How long did development and implementation timelines take in your past projects?

Asked by: Offline Attendee

BUSINESSNEXT Response: We are committed to delivering within the agreed development timeline. The actual duration depends on the bank's cooperation and system readiness.

Q.10 | If the first release happens in 3 months, is that considered a good timeline?

Asked by: Ezir Kushairi

BUSINESSNEXT Response: Yes, it is. We can deliver in 4 months, citing the SIB case study as a reference.

Q.11 | Which areas can a System Integrator (SI) support in your implementation plan?

Asked by: Ezir Kushairi

BUSINESSNEXT Response: System Integrators (SIs) can support branch banking, as well as testing and User Acceptance Testing (UAT).

Q.12 | As a vendor, will you be able to integrate with the Martech solution and other third-party solutions?

Asked by: Ezir Kushairi

BUSINESSNEXT Response: Yes, easily.

Q.13 | Have you done any RFP where KPI is part of commercials? How will BUSINESSNEXT help Maybank achieve 85% adoption rate (operational KPI)?

Asked by: Ezir Kushairi

BUSINESSNEXT Response: Not exactly, but we have worked on similar use cases and can sit for a discussion on how we can help Maybank's team drive its KPIs.

Q.14 | How does customisation take place in the platform? How much can the Maybank team do on their own, and to what extent would BUSINESSNEXT support it?

Asked by: Offline Attendee

BUSINESSNEXT Response: Our solution is configurable, not customisable. We are a low code/no-code platform with 13 levels of designers. We have worked on projects where new scope was added after implementation started, and can discuss and execute the same with Maybank.

Q.15 | How will the data from various source systems in regional countries be managed in the implementation, and what is required from each sector in terms of resources and time commitment for the data workstream?

Asked by: Leow Eu Jin

BUSINESSNEXT Response: Data from each regional source system will be assessed, integration approach finalised and validated through a centralised data workstream during the Information Discovery Sessions with local country participation. Each team will need designated business, data, and IT representatives to support data discovery, mapping, testing, and sign-off, with effort increasing significantly during migration testing and go-live preparation.

Q.16 | If we are getting a CDP for MarTech, how soon would that CDP need to be ready before CRM can be deployed?

Asked by: Kong Mun Hork

BUSINESSNEXT Response: The CDP would be required to be ready before the development cycle.

Q.17 | Based on your past implementations, what are the top 3 recurring issues / risks faced during implementation, and what have you done to mitigate them?

Asked by: Leow Eu Jin

BUSINESSNEXT Response: Top 3 risks and mitigation strategies: (1) Vision Alignment – Senior management not aligned with project vision; mitigation: onboard champions early, run change management, secure top-management commitment. (2) Stakeholder Alignment – Project champions onboarded late; mitigation: involve key stakeholders from the discovery phase onwards. (3) Limited SME Involvement – Left the team without clear view of business pain areas; mitigation: involve SMEs throughout, maintain version-controlled FSDs, and keep test cases synced to latest specifications.

Q.18 | Ideally, what are 3 key hygiene factors to ensure smooth implementation and optimised usage of the given tool?

Asked by: MBI Ines

BUSINESSNEXT Response: The three core hygiene factors are: (1) Governance & Ownership – clear strategy, objectives, and decision-making; (2) Data & Process Quality – standardised, correct data, business outcomes, information, and workflows; (3) User Adoption & Enablement – training, support, and ongoing engagement. When these three foundations are in place, most tools can be implemented smoothly and deliver significantly higher business value.

Q.19 | As evidence of your track record in delivering similar solutions, please provide details of at least three successfully implemented projects, including bank name, geography, scope, measurable success metrics, and key lessons learned.

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: BUSINESSNEXT shared the material slides as part of ISS evaluation after the session.

Closure

The Proof of Concept (POC) engagement between BUSINESSNEXT and Malayan Banking Berhad (Maybank) was conducted successfully across four sessions from 18 to 23 June 2026 in Kuala Lumpur, Malaysia. The sessions covered a broad spectrum of functional and technical dimensions of the BUSINESSNEXT CRM platform, evaluated by stakeholders from Maybank's Global Consumer Financial Services (GCFS), Global Banking & Markets / Wholesale Banking (GGB), and IT & Information Security divisions.

A total of 190 queries were raised and addressed across the four days, spanning platform capabilities, architecture, integration, data governance, AI and analytics, user experience, implementation methodology, and commercial models. The breadth and depth of questioning reflect Maybank's thorough engagement and commitment to making a well-informed platform selection decision.

BUSINESSNEXT remains committed to partnering with Maybank through this evaluation and beyond, ensuring that the platform delivered is fully aligned with Maybank's strategic CRM objectives and long-term digital transformation goals.
