Day 3

22 June 2026 | Global Banking & Markets / Wholesale Banking (GGB)

Session 1 : Group–GGB | Wholesale Banking

Q.1 | Will the data be updated in real time for the user?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes.

Q.2 | Regarding the Corporate Structure view — what market intelligence (e.g., Moody's, Handshake, or any equivalent) can be readily integrated and kept up to date within the platform?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: We have our own integration engine, Autonomia, and have the capability to integrate with any data aggregator suggested by Maybank — whether it is Moody's, Bursa Malaysia, or CTOS. However, we will be dependent on Maybank to provide the relevant API details.

Q.3 | Can a wallet share indicator also be included?

Asked by: Ang Gaik Kee

BUSINESSNEXT Response: Yes, a wallet share indicator can be added. All dashboard widgets are configurable, and any data as per Maybank's requirements can be displayed, including wallet share information mapped on the Customer 360 view.

Q.4 | Can wallet share be tracked for Deposits and Loans?

Asked by: Ang Gaik Kee

BUSINESSNEXT Response: Yes, wallet share can be tracked across a client's total financial business across product lines and facilities — such as loans, deposits, treasury, and trade finance. We have successfully integrated with Moody's, Corpository, Quantifi, and TransUnion in past projects, and we can integrate with Malaysian data aggregators through our platform's integration engine.

Q.5 | The UI appears somewhat crude with overlapping boxes that make reading difficult. Is this an automated or manual design? The layout feels like a PowerPoint-style org structure with tooltips — can this be redesigned to match Maybank's design theme and format?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: The UI design is fully configurable. We can align the data and cards based on Maybank's requirements and design the org structure in Maybank's preferred design theme and format.

Q.6 | If the predictive model is customised, can the Maybank team maintain it in the long run? Are there proven baseline models available on the platform before any fine-tuning is applied?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: Yes, the predictive model will be delivered according to Maybank's criteria and can be maintained by Maybank's team in the long run. We also have proven baseline models available in our labs prior to any fine-tuning.

Q.7 | Can each of these financial data fields — especially those involving internal data calculations — be controlled or masked based on user role? Not all users should have visibility into this data; access should be determined by role (e.g., PRM, SRM, Product Specialist).

Asked by: Bay Jian Lin Astyn

BUSINESSNEXT Response: Absolutely. Data can be controlled and masked based on role-based access permissions. CRMNEXT has Role-Based Access Control (RBAC) that restricts specific users on data views. We will demonstrate an example of this in the second hands-on session.

Q.8 | Is there a mobile app available for front-liners who are mostly on the go? If yes, would it include a live transcript function (without recording) for RMs when meeting clients, so that an AI-generated call memo can be prepared?

Asked by: Bay Jian Lin Astyn

BUSINESSNEXT Response: Yes, we have an RM Mobile App for front-liners with all features relevant to corporate banking. Yes, we can provide a live transcript function on the app

(without recording) for RMs meeting clients, and an AI-generated summary can be produced to prepare the call memo — similar to the WORKNEXT prompts showcased in the demo.

Q.9 | What is World-Check? Is it a third-party solution or a term within this application?

Asked by: Rani a/p Sunnasamy

BUSINESSNEXT Response: World-Check is an AML screening tool used globally for all corporate onboarding and trade processes.

Q.10 | Do you provide the World-Check capability, or will you leverage Maybank's existing subscription? Who subscribes to World-Check — BUSINESSNEXT or Maybank?

Asked by: Rani a/p Sunnasamy

BUSINESSNEXT Response: As standard practice, banks subscribe directly to fintech APIs such as World-Check, as they typically receive preferential pricing and prefer to own and manage such integrations themselves. We are open to discussing this further at the appropriate stage.

Q.11 | For call memos, you mentioned integration with Microsoft Teams and Outlook. Do you have a live demo to showcase the flow from Outlook to Call Memo? Is there an Outlook add-in? Do RMs have the option to choose which emails to integrate with the CRM, or is it an automatic sync?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: We have adaptor integrations with both Teams and Outlook. For Teams integration, we will showcase a live demo. For Outlook, we are checking with our offshore team on the feasibility of a live demo during the session.

Q.12 | Will dashboards include SLA alerts built in to notify staff and supervisors on items needing attention in the middle office? Are dashboards customisable by Maybank's internal team, or would vendor involvement be required for changes? Would this be managed at Maybank's end or at the vendor's?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Yes, dashboards can include SLA alerts. Dashboards are configurable through the UI via the Admin Console. Alert management is built in across all modules to notify staff and supervisors. The centralised admin or COE can implement

dashboard configurations for each country. We would train them as part of the project. We can provide support wherever the bank needs assistance.

Q.13 | Where is the data coming from? You mentioned CTOS.

Asked by: Rani a/p Sunnasamy

BUSINESSNEXT Response: The data in Corporate comes from 3 sources: the bank ecosystem, data aggregators, fintech partners, and the CRM itself. We integrate with CTOS and have the experience and capability to integrate with any data aggregator that Maybank recommends — be it Moody's, Bursa Malaysia, or CTOS. However, we will be dependent on Maybank to provide the API details.

Q.14 | Can CRMNEXT perform an FRA search on directors or shareholders?

Asked by: Ang Gaik Kee

BUSINESSNEXT Response: CRMNEXT can integrate with any Credit Rating Agency, e-court system, or the Malaysian Department of Insolvency for FRA searches on directors and shareholders.

Q.15 | If time permits, please show a use case of contact centre capabilities. The GGB will have service desks at various branch levels — how does this map to the CRMNEXT workflow?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: Showcased in the second half of the session.

Q.16 | If we already have an onboarding system today, how will this workflow integrate with those systems? Will the drag-and-drop approach still work?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: Yes.

Q.17 | Wallet share for Deposits & Loans?

Asked by: Ang Gaik Kee

BUSINESSNEXT Response: The wallet share can be tracked across the client's total financial business across product lines and facilities — such as loans, deposits, treasury, and trade finance. We have successfully integrated with Moody's, Corpository, Quantifi, and

TransUnion in past projects. We can integrate with Malaysian data aggregators using our integration engine within the platform.

Q.18 | Are these workflows configurable based on the bank's workflow structure? If yes, can you show how this is configured from the admin console?

Asked by: Bay Jian Lin Astyn

BUSINESSNEXT Response: Yes, these workflows are configurable through the UI via the admin console. We will include a showcase of the workflow configuration capability in the upcoming sessions.

Q.19 | On top of this, will the Pipeline or Deal creator have the option to configure the deal creation stage (drag and drop) without full admin privileges?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: We can create a sub-admin role for a closed group of business users to configure the deal creation stage using drag and drop. This allows users to configure deal stages without full system admin rights.

Q.20 | How do you integrate with third parties then?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: We have our own integration engine, Autonomia, and have the experience and capability to integrate with any data aggregator that Maybank recommends. We will be dependent on Maybank to provide the relevant API details.

Session 2 : Hands-on Demo | GGB Platform Exploration

Q.1 | Can WORKNEXT provide a summary of past meetings and tasks instead of the RM having to review each item individually?

Asked by: James Leong

BUSINESSNEXT Response: Yes, WORKNEXT can generate meeting summaries and highlight key action items, reducing the need for the RM to manually review each entry.

Q.2 | Can WORKNEXT provide a summary of roadmaps, deals closed, and deals still open for a new RM taking over an account?

Asked by: James Leong

BUSINESSNEXT Response: Yes. When a portfolio is transferred to a new RM, all deals (open and closed), as well as current and past data, are available to the incoming RM. Account summaries can be generated using WORKNEXT.

Q.3 | I am experiencing noticeable lag while scrolling and navigating the POC environment. Is this caused by the ongoing demo affecting the performance of the hands-on POC environment?

Asked by: Bay Jian Lin Astyn

BUSINESSNEXT Response: The ongoing demo would not cause a lag during scrolling. We are logged in with Maybank Wi-Fi and no lag is currently observed on our end. This may be an intermittent issue related to network bandwidth. If the issue persists, we can address it during the dedicated hands-on session.

Q.4 | Can you show a demo for Investment Banking deals?

Asked by: Belinda Chin Sok Ping

BUSINESSNEXT Response: Yes, Investment Bank capability on CRM was showcased as part

Q.5 | What can be searched through the search bar? I am unable to search for certain records.

Asked by: Offline Attendee

BUSINESSNEXT Response: The search bar supports searching across multiple entities including customers, leads, service requests, accounts, and opportunities. If a specific search is not returning results, this may be a configuration or data availability issue that can be reviewed.

Q.6 | Can I put in a keyword and look for a specific document within a client profile?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform supports keyword-based search within client profiles, including linked documents.

Q.7 | Can the advanced search option allow us to search by client segment or product type?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the advanced search function supports filters by client segment, product type, and other configurable parameters.

Q.8 | Regarding OCR on documents — what other document types can be recognised beyond MyKad?

Asked by: Offline Attendee

BUSINESSNEXT Response: Our Document AI solution can extract data from a wide range of Malaysian structured and unstructured documents, including passports, visas, utility bills, and financial statements. If the bank has an existing OCR solution, we can integrate with it as well.

Q.9 | From a Relationship Manager's perspective, what is the recommended workflow when onboarding a new corporate client, and how does the platform guide the RM through the process?

Asked by: Chiu Kok Hoe

BUSINESSNEXT Response: The platform provides a guided onboarding workflow journey for the RM, covering KYC, document collection, AML screening, credit bureau checks, and approval workflows. The system intelligently guides the RM through each step and flags any missing or non-compliant information.

Q.10 | My screen appears to be showing a different view from what you have shared. How can we align the display?

Asked by: Offline Attendee

BUSINESSNEXT Response: This may be due to a different user role or access profile being applied. We assisted in aligning the configuration during the hands-on session.

Q.11 | Can CRMNEXT support the creation of separate client service plans for different relationship segments (e.g., Tier 1, Tier 2)?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, CRMNEXT supports the creation of segment-specific client service plans, which can be configured based on relationship tiers and banking segments.

Q.12 | Can RMs be granted access similar to the contact centre agents to log service requests directly from the client's profile?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, RMs can be granted role-based access to log service requests directly from the client's 360-degree profile, similar to contact centre agent capabilities.

Q.13 | Is CRMNEXT able to provide a consolidated service request view across all clients managed by an RM?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform provides a consolidated view of all service requests across the RM's entire client portfolio, with filters for status, SLA, and priority.

Q.14 | Can the report be customised for individual users and their supervisors separately?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, reports can be customised based on user roles. Individual RMs can access their own performance reports, while supervisors can view aggregated team-level reports.

Q.15 | Does CRMNEXT support integration with Zoom, including call logging and transcript capture?

Asked by: Offline Attendee

BUSINESSNEXT Response: Currently, we have confirmed integration adapters for Microsoft Teams and Outlook. Integration with Zoom can be explored as an additional requirement.

Q.16 | Can RMs generate reports or view a complete history of issues raised by a specific client?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, RMs can generate client-specific reports and view the complete history of interactions, service requests, and issues raised by each client.

Q.17 | Is it possible to introduce additional user experience scenarios tailored to the GGB segment's specific needs?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform is highly configurable, and additional user experience scenarios tailored to the GGB segment can be designed and implemented based on Maybank's requirements.

Q.18 | What are the functions available in the Customer 360 view?

Asked by: Offline Attendee

BUSINESSNEXT Response: The Customer 360 view provides a comprehensive profile including personal and company information, relationship hierarchy, portfolio summary, interaction history, service requests, opportunities and pipeline, alerts and reminders, and AI-driven next best actions.

Q.19 | Does the platform support bulk data upload of historical data from existing systems?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform supports bulk data upload through batch integration jobs via the Autonomia integration engine, allowing historical data migration from existing systems.

Q.20 | What document formats are supported for document uploads within the platform?

Asked by: Offline Attendee

BUSINESSNEXT Response: The platform supports a wide range of document formats including PDF, DOCX, XLSX, JPG, PNG, and TIFF. Additional formats can be configured based on requirements.

Closure

The Proof of Concept (POC) engagement between BUSINESSNEXT and Malayan Banking Berhad (Maybank) was conducted successfully across four sessions from 18 to 23 June 2026 in Kuala Lumpur, Malaysia. The sessions covered a broad spectrum of functional and technical dimensions of the BUSINESSNEXT CRM platform, evaluated by stakeholders from Maybank's Global Consumer Financial Services (GCFS), Global Banking & Markets / Wholesale Banking (GGB), and IT & Information Security divisions.

A total of 190 queries were raised and addressed across the four days, spanning platform capabilities, architecture, integration, data governance, AI and analytics, user experience, implementation methodology, and commercial models. The breadth and depth of questioning reflect Maybank's thorough engagement and commitment to making a well-informed platform selection decision.

BUSINESSNEXT remains committed to partnering with Maybank through this evaluation and beyond, ensuring that the platform delivered is fully aligned with Maybank's strategic CRM objectives and long-term digital transformation goals.
