Session 1 : Technical and IT Security	3
Session 2 : Technical Deep Dive	10
Session 2 (Parallel) : Hands-on Demo.....	14
Closure	20

Day 4

23 June 2026 | IT & Information Security

Session 1 : Technical and IT Security

Q.1 | SBI case study: How did you achieve a 90% reduction in average loan processing time?

Asked by: Offline Attendee

BUSINESSNEXT Response: The transformation was implemented department by department. The key driver was Loan Origination System (LOS) automation, and the resulting outcomes were embedded within the core system, which contributed to these measurable improvements.

Q.2 | Can you share the technical challenges you encountered while addressing siloed systems in the RHB engagement?

Asked by: Offline Attendee

BUSINESSNEXT Response: The primary challenge was integration with Onyx and other core systems. During UAT, customer data was found to be inconsistent across different systems, which required significant effort to reconcile and align, along with ramping up the implementation team to resolve data quality issues.

Q.3 | Does your system require custom adapters to support various systems within the bank? What integrations have been completed with different systems? For multi-country deployments, will each country have its own instance?

Asked by: Offline Attendee

BUSINESSNEXT Response: We have ready-made adapters available for most integrations. We have supported CTI integrations with Avaya and Cisco, among others. We maintain a single unified codebase across the platform. For deployment options, we have provided detailed options which can be discussed with the bank separately.

Q.4 | Does the application work regardless of whether it is deployed on SaaS or on the bank's own landing zone?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: Yes. We can deploy the application on an on-premise setup locally as well.

Q.5 | Are image and OCR transcription capabilities available as microservices out of the box, or do they rely on third-party solutions?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: We support both approaches. We have our own Document AI for image and OCR extraction for structured and unstructured data. Additionally, we can leverage industry-standard OCR or Document AI solutions if the bank already has existing investments.

Q.6 | Is Masking and PII Masking a built-in function within the solution?

Asked by: Au Chee Hoong

BUSINESSNEXT Response: Yes. Masking and PII Masking are built-in functions within the solution.

Q.7 | What components come under BUSINESSNEXT licensing, and what needs to be covered by the customer? Is there a recommended tool set, and do any of these come licensed with the SaaS package?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: BUSINESSNEXT provides its platform as a packaged offering on SaaS with managed services. The bank does not need to factor in any additional software for the deployment. If the bank opts for an on-premise or landing zone deployment managed by the bank, we have shared the infrastructure sizing – including compute specifications – as part of our proposal response. All licensing charges for the components showcased are bundled within the BUSINESSNEXT platform offering.

Q.8 | What databases can the bank choose from? Do these offerings come out of the box (OOB) or need to be included additionally? Please also showcase the tech stack slide.

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: The bank can choose between on-premise or cloud-based database options as per preference. We have provided pricing for both SaaS and the Azure landing zone options, including the sizing done for each. The tech stack details were presented as part of the session.

Q.9 | How does the system identify the nature of data coming from different source systems? Is this done autonomously? How does the system understand and auto-populate data? Is there a built-in data population module?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: We have our own integration engine, Autonomia Engine, which supports both batch jobs and API services. For example, if we need to ingest 50 million customer records, we can create an integration batch job. We support all data source types. We also have DATANEXT for data classification, which can be offered as a separate module and has not been factored into the current proposal.

Q.10 | How does the licensing work? Is it based on the deployment model?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: Licensing is based on named users and is independent of the deployment model.

Q.11 | How do you mitigate blast radius scenarios (e.g., server failures)?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: For on-premise deployments: We implement High Availability (HA) and Disaster Recovery (DR). For SaaS deployments: We operate across multiple data centres, e.g., EC1 – Singapore, EC2 – Mumbai.

Q.12 | How do you provide team resources for cloud deployment?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: Our company has a dedicated cloud team for deployment. The remaining resources are allocated regionally based on the project requirements.

Q.13 | Can the complete tech stack be deployed in the Maybank landing zone? Will application maintenance follow the Maybank cycle?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: Yes, CRMNEXT can be deployed within the Maybank landing zone, subject to infrastructure readiness and alignment with the bank's enterprise architecture, security, and deployment standards. The platform supports containerized deployment on

enterprise Kubernetes platforms and can be deployed in on-premises, private cloud, or public cloud environments, enabling alignment with Maybank's target hosting model.

Application maintenance, including releases, patches, upgrades, and change management activities, can be planned and executed in accordance with Maybank's application maintenance and release management cycles. BUSINESSNEXT follows a collaborative governance approach to align deployment schedules, testing, and production rollout with the bank's established IT processes and operational requirements, subject to mutually agreed implementation and support procedures.

Q.14 | Can we support other cloud providers, or is the solution fine-tuned only for Azure?

Asked by: Manjula Seneviratne

BUSINESSNEXT Response: BUSINESSNEXT is a cloud agnostic platform and does not lock you into any one specific cloud platform.

Q.15 | Have you factored in user licences for the Production environment?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: Named user licences are applicable under the Production environment. We can also provide licences for UAT if needed.

Q.16 | Is there anything extra that the bank has to pay for managed services in the bank's landing zone?

Asked by: Manjula Seneviratne

BUSINESSNEXT Response: We have checked with the bank on its preference for SaaS or its own landing zone and have provided both options. Billing for managed services in the bank's landing zone will be discussed and agreed at the contracting stage.

Q.17 | How have you factored in the availability zones?

Asked by: Manjula Seneviratne

BUSINESSNEXT Response: In the SaaS option, availability zones have been factored in within the same country, with DR in another country — not factored in the current pricing but can be discussed.

Q.18 | Do you only support OpenShift?

Asked by: Manjula Seneviratne

BUSINESSNEXT Response: We support Nutanix, Rancher, and others. All of these just need to be Kubernetes-compliant application platforms.

Q.19 | How do you ensure interconnectivity between these microservices?

Asked by: Manjula Seneviratne

BUSINESSNEXT Response: These are connected within a single BCP; all services are connected via gRPC.

Q.20 | Have you proposed Fargate?

Asked by: Offline Attendee

BUSINESSNEXT Response: Fargate is used when you have a fixed schedule for the system to be up. Hence, we have suggested a Kubernetes-based approach as it provides more flexibility and scalability.

Q.21 | Is the automated test case capability part of the BUSINESSNEXT tool that we can use for the Maybank project?

Asked by: Too Pian Liang

BUSINESSNEXT Response: Yes, we can use the test case automation approach for the Maybank project.

Q.22 | The deck shared before does not include all slides shown in this session – please share the revised deck.

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the revised deck has been shared.

Q.23 | You have positioned batch management with the Autonomia integration – can you elaborate on how this works?

Asked by: Offline Attendee

BUSINESSNEXT Response: This was addressed in detail during the second session on 23rd June 2026.

Q.24 | Does the solution support Change Data Capture (CDC)-based ingestion to capture and process incremental changes in real time?

Asked by: June Woo Yee Mei

BUSINESSNEXT Response: Yes, the solution supports Change Data Capture for the scope of the implementation.

Q.25 | Does the solution support data-driven refresh and ingestion triggers based on source data availability, in addition to time-based scheduling?

Asked by: June Woo Yee Mei

BUSINESSNEXT Response: Yes, BUSINESSNEXT supports both data-driven ingestion triggers and time-based scheduling. Data-driven triggers activate when new data is available at the source, while time-based scheduling enables periodic refresh cycles as required.

Q.26 | Is the list of connectors and adaptors shared in the slide non-exhaustive?

Asked by: Au Chee Hoong

BUSINESSNEXT Response: Yes, those are just a few examples. We can connect to any systems or adaptors through our Autonomia Integration Engine.

Q.27 | Is there any limitation on API calls — such as extra cost or throttling — from an external system to the BUSINESSNEXT platform?

Asked by: Too Pian Liang

BUSINESSNEXT Response: From an application standpoint, BUSINESSNEXT does not charge per API hit when deployed On-Premise or in the bank's landing zone. For SaaS, the API call limits are factored into the pricing model and can be discussed at the contracting stage.

Q.28 | Can other systems call the BUSINESSNEXT API?

Asked by: Muhd Nur Azharuddin Bin Abd Rahanuddin

BUSINESSNEXT Response: Yes. BUSINESSNEXT has out-of-the-box web services that allow other systems in the bank's ecosystem to call the BUSINESSNEXT platform via REST APIs.

Q.29 | How does the solution manage late-arriving or delayed data to ensure data consistency and freshness?

Asked by: June Woo Yee Mei

BUSINESSNEXT Response: BUSINESSNEXT maintains data consistency when handling delayed or late-arriving data through a version-sequencing mechanism, ensuring that only the latest valid state is applied, and older delayed records do not overwrite more recent data.

Q.30 | The '10,000 API calls per day per user' — does this mean per named licence user? What happens if the user reaches the limit?

Asked by: Too Pian Liang

BUSINESSNEXT Response: Yes, 10,000 API calls per day per named licence user is more than sufficient for typical usage. The implementation team will configure throttling controls to ensure that limit is not breached under normal operations.

Q.31 | Regarding version sequencing — does the system evaluate the sequence to ensure that an older, delayed state does not accidentally overwrite a more recent one?

Asked by: June Woo Yee Mei

BUSINESSNEXT Response: Yes.

Session 2 : Technical Deep Dive

Q.1 | What is the data centre used for SaaS deployment?

Asked by: Offline Attendee

BUSINESSNEXT Response: The data centre location is determined by the bank's data residency requirements. We operate across multiple regions and can confirm the specific location upon finalisation of the deployment model.

Q.2 | Is the dashboard and chart design stored in the database or in files? If stored in files, how are they synchronised across multiple application servers in a high-availability design?

Asked by: Yau Way Yang

BUSINESSNEXT Response: The dashboard and chart designs are stored in the database schema. Dashboard layouts, widget positions, chart types, and configurations are serialised into a structured data format (e.g., JSON or XML) and stored in a database table (e.g., PostgreSQL or MySQL). This handles high availability perfectly – multiple application servers connect to the same central or clustered database. No file synchronisation is required. Database replication handles HA and data durability automatically.

Q.3 | Do you have a data dictionary covering all configurable fields?

Asked by: Too Pian Liang

BUSINESSNEXT Response: Yes, we will provide a data dictionary for the scope of the implementation.

Q.4 | Can the application be deployed locally on the bank's infrastructure?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes. We can deploy the application on an on-premise setup within the bank's local infrastructure as well.

Q.5 | Are image and OCR transcription capabilities available as microservices out of the box, or do they rely on third-party solutions?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: We support both approaches. We have our own Document AI for image and OCR extraction for both structured and unstructured data. Additionally, we can leverage industry-standard OCR or Document AI if the bank already has existing investments in this area.

Q.6 | Is Masking and PII Masking a built-in function within the solution?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: Yes. Masking and PII Masking are built-in functions within the solution.

Q.7 | What components come under BUSINESSNEXT licensing, and what needs to be covered by the customer? Is there a recommended tool set, and do any of these come licensed with the SaaS package?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: BUSINESSNEXT provides its platform as a packaged SaaS offering with managed services. The bank does not need to factor in any additional software for deployment. For on-premise or bank-managed landing zone deployments, we have shared the infrastructure sizing (compute specifications) as part of our proposal. All showcase components and license charges are bundled within the BUSINESSNEXT platform offering.

Q.8 | The automated test case — is it part of the BUSINESSNEXT toolset or a third-party tool?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: It is part of the BUSINESSNEXT toolset. We have an in-built test automation framework that supports regression testing and UAT.

Q.9 | Does the solution support Change Data Capture (CDC)-based integration for real-time data synchronisation?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform supports CDC-based integration for real-time data synchronisation, enabling near real-time updates from source systems into the CRM.

Q.10 | Is there any limitation on API calls — such as additional costs or throttling?

Asked by: Offline Attendee

BUSINESSNEXT Response: API call limits and throttling configurations are determined based on the agreed deployment model and usage volumes. Specific limits and associated costs can be discussed and formalised during the contracting phase.

Q.11 | Can other systems call the BUSINESSNEXT API?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform exposes well-documented REST APIs that can be called by other systems within the bank's ecosystem, enabling bi-directional integration.

Q.12 | How does the solution manage late-arriving or delayed data from source systems?

Asked by: Offline Attendee

BUSINESSNEXT Response: The platform supports configurable data ingestion pipelines that can handle late-arriving data through defined reconciliation and reprocessing logic, ensuring data consistency.

Q.13 | Does the system evaluate the version sequence to ensure that older, delayed data does not overwrite more recent records?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform implements version sequencing and timestamp-based conflict resolution to ensure that late-arriving data does not overwrite more recent records. Data integrity is preserved through idempotent processing logic.

Q.14 | If we want our internet banking channel to trigger a service request in the CRM, how would this integration work end to end?

Asked by: Offline Attendee

BUSINESSNEXT Response: The internet banking channel would call the BUSINESSNEXT REST API to create a service request in the CRM. The API accepts the required data payload, creates the SR in the system, and returns a confirmation reference. The status updates can then be pushed back to the internet banking channel via webhook or API polling.

Q.15 | Is there any additional cost when executing AI prompts — specifically relating to LLM usage?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: Yes, AI and LLM usage costs are transparent and factored into the AI module pricing. The specific components and pricing details can be discussed during the contracting phase.

Q.16 | Can the extracted data from AI or OCR be saved into a database or data store?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the extracted data from AI and OCR processes is persisted in the CRMNEXT database and can also be pushed to the bank's data store or data warehouse via the integration engine.

Q.17 | If the bank opts for Azure deployment, how will the security architecture be designed and managed?

Asked by: Ahmed Bin Tariq

BUSINESSNEXT Response: For Azure deployments, we follow a defence-in-depth security architecture leveraging Azure-native security services including Azure Active Directory, Azure Key Vault, Azure Security Centre, and network security groups. We adhere to Azure Well-Architected Framework principles and can align with Maybank's existing Azure security policies.

Q.18 | Can real-time insights be generated based on conversations or interactions captured in the system?

Asked by: Offline Attendee

BUSINESSNEXT Response: Yes, the platform supports real-time AI-driven insights based on captured interactions and conversations. These insights can be surfaced to the RM or supervisor through the dashboard or alert management module.

Session 2 (Parallel) : Hands-on Demo

Q.1 | Could you walk me through how lead generation is handled within your platform? Specifically: Is it possible to generate target audiences within BUSINESSNEXT (e.g., segmentation, rules, analytics)? If lead generation is performed externally via a data science or analytics platform, what are the available methods to ingest these leads into BUSINESSNEXT for campaign configuration?

Asked by: Tey Kai Yang

BUSINESSNEXT Response: Showcased the entire process via demo, covering internal lead generation through segmentation and rules, as well as external lead ingestion methods.

Q.2 | How are conversion metrics defined and configured during campaign setup? How can campaign performance data be exported after campaign completion? Can the reporting be segmented across different levels (e.g., branch → region → overall) to support multi-level performance analysis?

Asked by: Tey Kai Yang

BUSINESSNEXT Response: Showcased the entire process via demo, including conversion metric configuration, data export capabilities, and multi-level reporting segmentation.

Q.3 | How configurable is the lead conversion rule?

Asked by: Tey Kai Yang

BUSINESSNEXT Response: Yes, the lead conversion rules are highly configurable and can be modified easily within the system using the rule engine.

Q.4 | Can a request such as a Statement (PDF) request be handled as a straight-through process (STP) versus requiring a fulfilment team to action it, assuming the PDF statement is already available online?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Yes, the statement request can be an STP journey. CRMNEXT can pull up the transactions and send a PDF to the customer's email address without redirecting the request to any fulfilment teams.

Q.5 | Can you showcase the summary of utilisation and service requests for cash management products and services?

Asked by: Narimah Binti Amir

BUSINESSNEXT Response: Showcased via demo.

Q.6 | I assume the workflow is or will be based on operational efficiency – customised and country-specific?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Yes, the BUSINESSNEXT AutoFlow engine supports easy configuration and country-specific process creation and management.

Q.7 | Regarding campaign effectiveness – does the dashboard have a default template to keep a consolidated view on Campaign Manager buy decisions and key indicators? Does this include staff intervention where needed?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Yes, the dashboard supports configurable default templates for campaign effectiveness views, including key performance indicators and staff intervention flags where required.

Q.8 | Are campaign insights and analytics generated using AI, or do they require input from staff experts? Can insights and analytics be accessed on-demand?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: The platform supports both AI-driven campaign insights and analytics as well as expert-guided analysis. Insights and analytics dashboards can be accessed on-demand by authorised users.

Q.9 | Investment Banking: Please show the deal pipeline. I want to explore the features. Is 'Opportunity' equivalent to 'Pipeline' or 'Lead'?

Asked by: Bay Jian Lin Astyn

BUSINESSNEXT Response: Showcased via demo. The relationship between Opportunity, Pipeline, and Lead was explained and demonstrated within the context of the Investment Banking module.

Q.10 | Are we able to sort the deal pipeline by the most recently changed records — for example, deals where call memos have been recently updated, or deals that have progressed to the next stage?

Asked by: Goh Khing-Mae

BUSINESSNEXT Response: Showcased via demo.

Q.11 | For the service module — we can see SLA-breached, escalated, and open tickets. How can we launch these cases directly from the dashboard?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: This can be done in multiple ways. We have built SLA rules such that if a service request is raised on the 10th, it should be completed within 5 days. The system sends reminders 2 days before the breach, another 1 day before, and a final reminder a few hours before. This way, both the owner and the assigned user receive timely notifications to prevent SLA breaches. Even if an SLA is breached, the bell icon on the notification summary page highlights all such cases. All of this is designed to ensure SLAs are not breached.

Q.12 | How do we create a new case from a call received from a customer?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: When a call from a registered customer reaches the Contact Centre agent, the customer's 360-degree profile pops up. Once the customer describes the issue, the agent can navigate to 'Create Service Request' and log the request. If the service request is not closed by the RM or assigned user, a different workflow is triggered in which the SR is assigned to the relevant team member for resolution.

Q.13 | Can a user create or customise a report independently, including self-performance reports? Can reports be exported in chart or table format?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: Users can be given role-based access to create, edit, and export reports, including self-performance reports. Reports can be shared via email and exported in CSV or XLSX format.

Q.14 | Is the customer report dependent on CTI or on the CRM system? Is this true for all reports?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: It can vary case by case. The dependency on the CTI vendor relates to call duration and timeline data, which needs to be integrated into the CRM via a configured flow. For reports where the data resides within the CRM, the reports can be generated directly from the system. For data from other core systems, we integrate and fetch the necessary data to support report generation.

Q.15 | Does the reporting process require vendor intervention?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: This can be managed at the user level based on role-based access. The extent of vendor involvement can be discussed with the bank and determined as part of the overall support strategy.

Q.16 | Can we configure report visibility? Can the system provide an Advanced Find function to retrieve relevant information?

Asked by: Theodore Low Soon Cheong (SG)

BUSINESSNEXT Response: Yes, report visibility can be configured smoothly in the system, as showcased via demo. Yes, the Advanced Find function is available. Note: The system currently applies rule-based find logic; predictive search capabilities can be explored as an enhancement.

Q.17 | I am having difficulty navigating to the Customer 360 view. How will the system guide an RM from the Customer 360 view to place an order for the customer?

Asked by: Shandy Lee Wei Ping

BUSINESSNEXT Response: Showcased via demo, demonstrating the end-to-end navigation flow from Customer 360 to order placement.

Q.18 | Are we able to sort the deal pipeline by the most recently changed records — for example, deals where call memos have been recently updated or deals that have progressed to the next stage?

Asked by: Alicia Chua (SG)

BUSINESSNEXT Response: Yes, the deal pipeline can be sorted by the most recently updated records, including call memos and stage progression. This functionality can be configured as required.

Q.19 | RFP Query: Integrated demand-supply views that provide visibility into lead volumes versus card sales capacity, enabling managers to optimise lead distribution and balance workloads across teams.

Asked by: Wan Fazlina Binti Wan Ahmad

BUSINESSNEXT Response: Yes, the platform supports integrated demand-supply views, enabling managers to visualise lead volumes against capacity and optimise workload distribution across teams.

Q.20 | RFP Query: Advanced performance analytics that provide quick in-app trend analysis of card applications generated by card sales, enabling supervisors and branch managers to monitor sales momentum and identify growth opportunities.

Asked by: Wan Fazlina Binti Wan Ahmad

BUSINESSNEXT Response: Yes, the platform provides advanced performance analytics with in-app trend analysis for card applications. Supervisors and branch managers can monitor sales momentum and identify growth opportunities through configurable dashboards.

Q.21 | RFP Query: Ability to extract and display the YTD spending at customer and card level.

Asked by: Wan Fazlina Binti Wan Ahmad

BUSINESSNEXT Response: Yes, the platform can extract and display Year-To-Date (YTD) spending at both the customer level and the card level.

Q.22 | RFP Query: Ability to extract and display the YTD cashback earned at customer and card level.

Asked by: Wan Fazlina Binti Wan Ahmad

BUSINESSNEXT Response: Yes, the platform can extract and display YTD cashback earned at both the customer level and the card level.

Q.23 | RFP Query: Ability to extract and display the YTD cashback earned at customer and card level (follow-up).

Asked by: Wan Fazlina Binti Wan Ahmad

BUSINESSNEXT Response: Confirmed as above — YTD cashback earned can be extracted and displayed at both customer and card levels. Integration with the core banking system will be required to source this data.

Q.24 | RFP Query: Ability to extract and display YTD TreatPoints/Membership Points earned at customer and card level.

Asked by: Wan Fazlina Binti Wan Ahmad

BUSINESSNEXT Response: Yes, the platform can extract and display YTD TreatPoints and Membership Points earned at both customer and card levels, through integration with the relevant loyalty management systems.

Q.25 | RFP Query: Ability to extract and display YTD TreatPoints/Membership Points redemptions — broken down by category (miles by airline, catalogue, on-the-spot) — at bank level (monthly and YTD) as well as customer and card level. All of these are parameterised.

Asked by: Wan Fazlina Binti Wan Ahmad

BUSINESSNEXT Response: Yes, the platform supports extraction and display of parameterised redemption breakdowns including TreatPoints and Membership Points by category (miles by airline, catalogue, on-the-spot), at bank level (monthly and YTD) as well as at customer and card level, through appropriate system integration.

Closure

The Proof of Concept (POC) engagement between BUSINESSNEXT and Malayan Banking Berhad (Maybank) was conducted successfully across four sessions from 18 to 23 June 2026 in Kuala Lumpur, Malaysia. The sessions covered a broad spectrum of functional and technical dimensions of the BUSINESSNEXT CRM platform, evaluated by stakeholders from Maybank's Global Consumer Financial Services (GCFS), Global Banking & Markets / Wholesale Banking (GGB), and IT & Information Security divisions.

A total of 190 queries were raised and addressed across the four days, spanning platform capabilities, architecture, integration, data governance, AI and analytics, user experience, implementation methodology, and commercial models. The breadth and depth of questioning reflect Maybank's thorough engagement and commitment to making a well-informed platform selection decision.

BUSINESSNEXT remains committed to partnering with Maybank through this evaluation and beyond, ensuring that the platform delivered is fully aligned with Maybank's strategic CRM objectives and long-term digital transformation goals.

BUSINESSNEXT

Proof of Concept Response | Maybank CRM Modernisation Initiative
